DETAILED ACTION

Information Disclosure Statement

1. The examiner has received/considered the applicant's IDS submitted on 01 Sep 04. The examiner in response to receipt of the International Search Report would like the applicant to expound on the proposed combination of references used to rejected the claims, in order to expedite prosecution.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mortensen et al., US 5,563,804 in view of Plog, US 6,414,724.

In considering claim 1, 4 and 7,

Mortensen discloses a system for providing closed captioning to an electronic discussion group. As shown in Figs 1, 2 and 3, users of a discussion group may receive video data via a tuner 1 through a network 6, in addition to receiving closed caption data from the video signal, and wherein the conferees may also receive captions generated from the user's discussion Figs 1a, 2a and 3a.

However, Mortensen does not explicitly recite the concept of a transparent background. Although it is noted that in the realm of captioning data, the background is typically made

Art Unit: 2622

transparent so that user's may view the main program without distortion (i.e. the captioning blocks out the video).

The examiner evidences such conventional practice by incorporating Plog which discloses teletext (caption data) using a transparent background.

Thus it would have been clearly obvious to one of ordinary skill in the art at the time of the invention to modify Mortensen which discloses the transmitting/reception/display of video and captioned data (to include discussion between users) to off the user the ability to view the video without obstruction by making the background of the caption data transparent.

In considering claims 2-3,

As discussed above with respect to claim 1, the combination of Mortensen/Plog discloses the transparency (color). Regarding the conventional recitations of the codes, position and size, the examiner takes "OFFICIAL NOTICE" since this information is necessary by the display in order to decode/display such captioning data.

In considering claims 5 and 8,

The combination above does not explicitly recite "dot matrix" however this is a conventional format of captioned data, thus the examiner takes "OFFICIAL NOTICE" regarding such. See attached PTO-892 US20030215219.

In considering claims 6, 9-10,

The combination above does not explicitly recite the positions/locations of the CODEC of the caption overlay and caption generating module, however the practice of encoding/decoding in a first path (transmission) and 2nd path (reception) both being in the service

Art Unit: 2622

channel is conventional in the art and thus the examiner takes "OFFICIAL NOTICE" regarding such. See cited references, US 5,508,754 and US 5,343,239.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure—see newly cited references on attached form PTO-892.

publication submissions in electronic publication-ready form. EFS includes software to help customers prepare submissions in extensible Markup Language (XML) format and to assemble the various parts of the application as an electronic submission package. EFS also allows the submission of Computer Readable Format (CRF) sequence listings for pending biotechnology patent applications, which were filed in paper form.
